

Appendix C

List of State-Owned Buildings in the 100-Year Floodplain

Procedure: All State Agencies having building authority provided data on State-owned buildings. The buildings were located on ADC (Alexandria Drafting Co.) maps and then on the FIRM (Flood Insurance Rate Map) to determine if they are shown as in the 100-year floodplain. Where building plans and elevations were readily available, data on building date, lowest floor elevation, lowest habitable space, and the lowest point of entry of floodwaters have been recorded.

Headings:

CO – The county in which the building is located. Two letter abbreviations are used, i.e., BA is Baltimore County, BC is Baltimore City, etc.

Agency – The building appears on this agency's inventory. The Organizational Abbreviations are used from the information section of the MD State Telephone Directory.

Location – Includes the name and the location of the facility where the flood-prone building is located

Building Type – Describes the type or use of the flood-prone building

Date – Year of construction

LF – The lowest floor elevation of the building, recorded as feet above mean sea level. If the building has a basement, LF refers to the basement floor.

LLS – The elevation of the lowest living space of the building, recorded as feet above mean sea level. The lowest floor having habitable living or office space is the LLS.

LPE – The lowest point of entry for floodwaters, such as windows, doors, or vents, recorded as feet above mean sea level.

BFE – Base Flood Elevation, which is the water surface elevation predicted for the 100-year flood, in feet above mean sea level. An "A" indicates an unnumbered A-zone, where water surface elevation is unknown.

FIRM Panel – The community Flood Insurance Rate Map panel which contains the floodplain information

Water Body – The nearest body of water which is the flooding source.

In or Near – Indicates whether the building is within or very near to the 100-year floodplain boundary on the FIRM

Cond – Indicates the flooding condition. “1” indicates the building itself is in the 100-year floodplain. “2” indicates that the building itself is elevated above the 100-year flood elevation, but would be surrounded by floodwaters
